

ASSESSMENT

AI Readiness Assessment

A self-assessment to gauge where AI can realistically create value for your business — rate each statement from 1 (not true) to 5 (completely true).

Data

Our core business data (customers, transactions, operations) is stored digitally, not on paper or in disconnected spreadsheets.

1 2 3 4 5

Our data is reasonably clean and consistent, not full of duplicates and gaps.

1 2 3 4 5

Process

We have processes documented well enough that we could explain them to a new system, not just a new hire.

1 2 3 4 5

There are specific, repetitive, time-consuming tasks we could point to today as AI candidates.

1 2 3 4 5

People & Skills

At least one person on the team is comfortable evaluating and adopting new tools.

1 2 3 4 5

Our team is generally open to changing how they work, not attached to the current way by default.

1 2 3 4 5

Tools & Infrastructure

Our current software systems can realistically connect to new tools (via integrations or APIs).

1 2 3 4 5

We have budget set aside for tools, not just headcount.

1 2 3 4 5

Leadership & Buy-in

Leadership has a specific business outcome in mind for AI, not just a general interest in “using AI.”

1 2 3 4 5

We're prepared to change a process, not just bolt AI onto how things already work.

1 2 3 4 5

Interpreting Your Score

- 40–50** You're ready to pilot AI in a specific, high-value process now.
- 25–39** Real potential, but fix data or process gaps first — otherwise AI will amplify existing problems.
- Below 25** Focus on foundational data and process work before investing in AI tools.
