

Sales Audit Template

Diagnose the gaps in your sales process and pipeline before they cost you revenue. Fill this out honestly with your actual numbers — not targets.

1. Pipeline Health

How many qualified opportunities are in your pipeline right now?

What is your current lead-to-close conversion rate?

What percentage of your pipeline is stuck (no movement in 30+ days)?

2. Process Consistency

Do all reps follow the same qualification criteria? If not, where do they diverge?

What happens, step by step, between first contact and closed-won? List the stages.

Where do deals most commonly stall, and why?

3. Team Capability

Rate your team's objection-handling skill (1–5) and note the most common objection they struggle with.

How long does it take a new sales hire to reach full productivity?

4. Customer Signals

What are the top 3 reasons deals are lost, based on actual feedback (not assumption)?

What do your best customers have in common?

Scoring Guide

Mostly clear answers	Your process is largely healthy — focus on optimization, not rebuilding.
Some blank spots	You have real gaps in visibility or consistency. Prioritize fixing measurement before scaling.
Mostly guesses	Sales is running on instinct, not process. This is the highest-leverage place to start.
